

# Enterprise Care Management Community – Skill Validation Simulation

ECM Project Team, GN, 9/2020

## Skill Validation Simulation

Each community partner (ie. Home Health Company) will schedule up to 2 of their educators/trainers/super-users a time to demonstrate their skills and receive validation by a Children's Health content expert. The preferred method is to use a Zoom virtual network to connect the user with the content expert. The user will need:

- a computer with camera and speakers available
- all equipment and supplies necessary to demonstrate their skill based on the activity. The list of supplies required for each activity are available on the Community Partners page on Childrens.com

During the simulated validation, the user will be validated objectively based on a rubric for each skill. A validation certificate will be issued to the user. After the educators/trainers/super-users are validated, they will in-turn validate the staff at their company. A rubric is available to ensure consistency in validation.

The user will complete all training material for the activity and then schedule an appointment for skill validation. Time blocks have been identified for the Children's Health content expert to be available for the validations. Those time blocks are updated on Childrens.com each quarter.

To schedule a time, send email to the content expert with the subject line **Community Partner Skill Validation**.

| Skill               | Content Expert   | Email address  |
